

Tutorial on Linear Regression Lines:

TI – 84 Calculator Series and Under

To my knowledge, the TI -84 calculators and under are all practically the same, just a different model each time. What I mean by “under” are the TI models such as : TI – 82, TI – 83, and TI – 83 plus and so on. **This guide is intended to show you step by step how to set up a plot points, graph them, calculate a linear regression line, and graph the line.**

The first thing to do is to make sure that your lists and your equations are clear. To begin with:

Start by pressing   

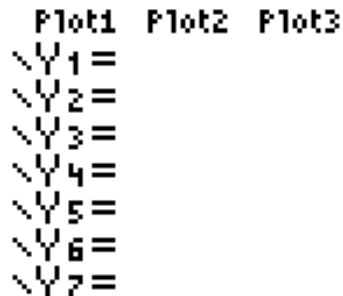

Then press      

You should see: 

The next thing to do is clear out any existing equations. To do this

Press  

Your screen should look like this:

```
Plot1 Plot2 Plot3
\Y1=
\Y2=
\Y3=
\Y4=
\Y5=
\Y6=
\Y7=
```

The next step is to plug in your x values and y values. To do that, you need to be sure that your x values go in L1 and your y values go in L2.

Press **STAT** **1** to edit:

```

3000 CALC TESTS
1:Edit...
2:SortA(
3:SortD(
4:ClrList
5:SetUPEditor
    
```

and then type in your x and y values.

L1	L2	L3	2
10	15		
20	20		
30	22		
40	27		
50	33		
60	45		
-----	-----		

L2(7) =

To plot the points and graph them

Press **2nd** **Y=** to get the Stat Plot:

```

5000 PLOTS
1:Plot1...Off
  L1 L2
2:Plot2...Off
  L1 L2
3:Plot3...Off
  L1 L2
4↓PlotsOff
    
```

press **1** **ENTER** to turn on the plot

```

3000 Plot2 Plot3
00 Off
Type: [ ] [ ] [ ]
      [ ] [ ] [ ]
Xlist:L1
Ylist:L2
Mark: [ ] + .
    
```

To graph the scatter plot:

Press   for ZoomStat:

and your graph should look like this:

```

MEMORY
4↑ZDecimal
5:ZSquare
6:ZStandard
7:ZTrig
8:ZInteger
9:ZoomStat
0:ZoomFit

```

To calculate the linear regression line or otherwise known as the best fit line.

Press    for Lin Reg

```

EDIT TESTS
1:1-Var Stats
2:2-Var Stats
3:Med-Med
4:LinReg(ax+b)
5:QuadReg
6:CubicReg
7↓QuartReg

```

Then press     

for: `LinReg(ax+b) L1,` and press 
`L2`

```

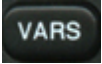

LinReg
y=ax+b
a=.5542857143
b=7.6
r2=.9302026693
r=.9644701495

```

Note that the number for a is your slope and the number for b is your y intercept.

***Note that when you do a different set of plots, you must repeat the calculation step of the linear regression line; otherwise it will use a previous linear regression line.*

To plot the linear regression line:

Press    for:

```
Y-VARS  
1:Window...  
2:Zoom...  
3:GDB...  
4:Picture...  
5:Statistics...  
6:Table...  
7:String...
```

Press    for:

```
XY Σ TEST PTS  
RegEQ  
2:a  
3:b  
4:c  
5:d  
6:e  
7↓r
```

and press

to place the equation in the y =

```
Plot1 Plot2 Plot3  
Y1 .55428571428  
571X+7.6  
Y2=  
Y3=  
Y4=  
Y5=  
Y6=
```

Then press  to see your
scatter plot and linear regression line:

** Be sure to clear and reset your calculator's window settings with zoom 6 and clear out your list, equations, and home screen when you're finished.
